

Magnetostrictive level transmitter

For bypass level indicators

Model BLM

WIKA data sheet LM 10.05

for further approvals
see page 2 and 3

Applications

- Transmitters for the continuous level measurement of liquids in bypass level indicators
- Chemical and petrochemical industries, offshore
- Shipbuilding, machine building
- Power generating equipment, power plants
- Pharmaceutical, food, water treatment, environmental engineering industries

Special features

- Continuous level measurement on the outside of the bypass
- 2-wire technology 4 ... 20 mA
- Measured value output via digital interface and a selectable measured value as analogue signal
- Case from stainless steel (display from glass)
- Magnetostrictive level measuring instrument with high resolution

Magnetostrictive level transmitter, model BLM

Description

Level transmitters with a magnetostrictive, high-resolution measuring principle are used for continuous level measurement of liquids and are based on determining the position of a magnetic float following the magnetostrictive principle. The level transmitters are mounted on the outside of a bypass level indicator.

The measuring process is triggered by a current impulse. This current produces a circular magnetic field along a wire made of magnetostrictive material, which is held under tension inside the sensor tube. At the point being measured (liquid level) there is a cylindrical float with permanent magnets acting as a position transducer, whose field lines run at right

angles to the impulse magnetic field. This magnetic field of the float tensions the wire. The superposition of these two magnetic fields triggers a mechanical wave in the wire. This is converted into an electrical signal at the end of the wire in the sensor housing by a piezoceramic pick-up.

The measured propagation delay enables the origination point of the mechanical torsional wave, and thus the float position, to be determined with high accuracy.

Illustration of the principle

Model overview

- Model BLM-S...: Standard version
- Model BLM-SxI (FFG-BP): Intrinsically safe (Ex i)
- Model BLM-SxD (FFG-BP): Flameproof enclosure (Ex d)
- Model BLM-T...: Compact version
- Model BLM-TAI (FFG-BT): Compact version, intrinsically safe (Ex i)
- Model BLM-SF-FM: FM version

Approvals

Standard version, model BLM-S...

Specifications

Connection housing (sensor housing)	Stainless steel 1.4404 Version with or without display, with window
--	--

Sensor tube

Material	Stainless steel 1.4571
Tube diameter	12 mm
Tube length L	Max. 5,800 mm

Medium temperature	-60 ... +185 °C
---------------------------	-----------------

Ambient temperature

Version without display	-40 ... +85 °C
Version with display	-20 ... +70 °C

Output signal	4 ... 20 mA, HART®
----------------------	--------------------

Power supply	DC 15 ... 30 V
---------------------	----------------

Measurement accuracy	< ±0.5 mm
-----------------------------	-----------

Resolution	< 0.1 mm
-------------------	----------

Load	max. 900 Ω at 30 V
